

EVENT	LIKLIHOOD	IMPACT	RISK	MITIGATION
Hardware malfunction	Possible	Severe	A hardware malfunction could cause a loss of all and any progress	Risk could be mitigated somewhat by backing up and saving regularly, luckily a online repository is being used for this purpose
One of the requirements of the task will prove difficult	Likely	Low – Mid	A problem will arise in the course of the project that I will struggle to solve and time will be wasted	Ask for help.
Trip to London	Inevitable	Low – Mid	The week in London may mean I have less time to work on the project as I will have things to do that may not be possible to do on the train in a small seat (relative to me)	Try and get as much done before Saturday.
Further research / learning	Likely	Mid	Some of the criteria for the project are still new concepts to me (such as testing and using a JDBC) and were only gone over very recently. I may have to go over some of the information again or research something more in order to complete the project.	-
Inexperience	Likely	Mid – Severe	While I feel I have understood most of what has been taught over the last month with QA I	-

			recognise that I am still fairly inexperienced with a number of aspects that are required for this project and so it will be easy for me to overlook things or underestimate how long it will take me to complete certain aspects of the project.
